

AI Audit Report

MSSV 23127326 | Audit date 2026-08-30

Declaration

AI was used for endpoint mapping, workload/test-plan design, JMeter XML generation, correlation/assertion review, JTL analyzer design, threshold proposal, human-review checklist and continuous performance-testing proposal.

Interaction log

#	Prompt / action	Output and human review
1	Read plan and Vietnamese requirements.	Established deliverables and constraints; checked manually.
2	Review SUT API and backend.	Found lockout, pagination, cart and checkout gaps; retained live evidence.
3	Generate three JMeter plans.	Human review found shared-CSV EOF unfairness; changed to per-VU CSV.
4	Analyze four raw JTLs.	HTTP errors 0; all failures are post-checkout assertions. JSON is reproducible.
5	Propose optimization actions.	Accepted contract-backed actions; old monitor rejected, four reruns captured valid CPU/RSS/thread evidence.

Human review checklist

- [x] No raw JTL, screenshot, video, metric or issue was fabricated.
- [x] Every VU uses a distinct account and per-VU CSV lifecycle.
- [x] Lockout probe is separate from positive workloads and reset is documented.
- [x] Listener views are not treated as non-GUI measurements.
- [x] HTTP errors are separated from business-gap assertions.
- [x] Metrics are reproducible from raw JTL.
- [x] Optimization claims are classified by implementation/profiling evidence.
- [] GUI screenshots included; student video remains pending.
